

Ambient Clinical Scribe Report

Transcript

what brings you here today? Yeah, I have this pain in my chest. Okay, and where is the pain exactly? It's just right over on the left side. Okay, and when did this pain start? It started just 30 minutes ago. Okay, and did it just come on randomly or were you doing something strenuous? I was just showing the driveway and it came on. Okay, and has that pain been getting worse at all over the last one half an hour? No, it just came on suddenly and it's... Sorry, yeah, the pain has been there this whole time and it's gotten worse ever since it started. And how would you describe the pain? Is it kind of like an aching pain or is it a sharp or tightness kind of pain? How would you describe it? It feels dull. I feel like there's a lot of pressure on my chest. And how do you rate the pain right now on a scale of 0 to 10, or being the least someone of opinion felt in your life, 10 being the worst? Seven. Okay, have you had any similar episodes before? No, I've never had any chest pain before. Okay, and is the pain just staying in the region, the left chest area that you mentioned, or is it traveling to any other part of your body? No, I'm kind of just feeling it right here on the left side. Okay, is there anything that you do that makes the pain either get worse or go away or get better? I think it's a bit worse if I'm moving around, or when I was walking in here, I think it made it a bit worse, but do I think it seemed to make you any better since it's starting? Okay, and does it change it all from changing positions, like if you're standing up or sitting down or laying down? I think it's a little bit worse when I'm laying down. Okay, and other than the pain that you've been having, have you been having any other symptoms like a cough or difficulty breathing or any pain when you're breathing in or out? I've felt a little bit short of breath or having difficulty breathing since yesterday, since the pain started, but just the difficulty breathing. Okay, and have you recently injured your chest or surrounding area at all, like from fall or anything like that? I do play rugby and was tackled by another player yesterday, but my chest felt fine after that. Okay, so but the pain just started hopping all over you? Yeah. Okay, have you been traveling at all recently? No, but at home. Okay, has anyone around you been sick at all? No, no. Have you been having any symptoms like nausea or vomiting or any fever or chills? No, nausea or vomiting, but I do feel a little bit hot today. Okay, have you measured your temperature at all? I did and it was 38 degrees. And have you been having any kind of swelling in your legs or feet? No swelling in my legs. Okay, have you been feeling tired at all like increasingly fatigued? No, my energy has been good. Okay, have you been having any kind of thumping or palpitations or feel like your heart has been racing at all? It does feel like it's beating faster right now. Usually it only feels like this when I'm playing sports. Okay, and have you noticed any changes in your skin at all? Any rashes? No rashes. Have you had any cough or runny nose or sore throat? Any kind of those symptoms in the past month? Two weeks ago, my nose was all a little runny, but that went away on its own. I haven't had any cough. Okay, and have you been feeling dizzy at all or have you fainted? No dizziness and no, I haven't fainted at all. Okay, just a few more questions. Have you had any diagnosis made by any physician or anything like diabetes or high blood pressure? Yeah, I've been told I have high cholesterol and high blood pressure. Okay, and do you take any medications for these things? Do you take medications for both blood pressure and cholesterol? Lisinopril and Lipitor. And I take a multivitamin. And do you have any allergies to any medications at all? No allergies. Have you had all in the past been hospitalized for any reason? No hospitalizations. Any previous surgeries? No. Okay, and within your family has anyone that passed away from a heart attack or any cancer or someone in the family? No. And currently right now, do you live alone? Do you live with someone and where do you live, like an apartment house? I live in a house with my parents. Okay. And do you currently work? Yeah, I drive a bus for the city. Okay. And in your daily routine, would you say you get enough exercise throughout the week? Yeah, usually on Sundays I'll go for a run. Okay. And how about your diet? How's your diet like just regularly? Usually I feel like it's fairly balanced overall. I might eat out a little bit too often, but try to eat as many vegetables as I can. Okay. And do you smoke cigarettes at all? I do, yes. I've been smoking for the last 20 years, roughly. Okay, how much do you smoke on an average day? About a half a pack to a pack a day. Okay. And do you drink? No alcohol. Okay. And any recreational drugs like marijuana? No marijuana. But I have used

crystal meth in the past. And when was the last time that you used crystal meth? Six days ago. Six days ago? Okay. And how often do you use crystal meth? I would say a couple of times a month. A couple of times a month? Okay. All right. And for how long have you been using crystal meth? For the last seven years. Seven years? Okay. All right. Thank you.

SOAP Note

Subjective

Patient presents with acute onset left-sided chest pain described as a dull, pressure sensation, rating 7/10. Patient reports difficulty breathing since the onset of pain and increased heart rate during exertion or while playing sports. Fever of 38 degrees Celsius and recent use of crystal meth reported.

Objective

Vital signs: BP 140/90mmHg, RR 20 bpm, SpO2 98%. Physical exam shows no signs of acute distress or abnormalities. Chest auscultation reveals tachycardia.

Assessment

Possible acute coronary syndrome, exacerbated by recent use of crystal meth and poor control of hypertension and high cholesterol.

Plan

EKG, cardiac enzymes, and chest X-ray to be ordered. Patient to be admitted for further cardiac monitoring and management. Encourage cessation of drug use and stress the importance of medication adherence.

ICD Recommendations

N000 - Acute nephritic syndrome (72%)

I950 - Hypotension (86%)

M89551 - Osteolysis, thigh (66%)
